

TESTIMONIALS

The owner was over the moon when the ESB meter stopped and EMMA started diverting his surplus solar PV power to his hot water and heating systems... in mid-February

EMMA - ENERGY AND MICRO-GENERATOR MANAGERS

FEEDBACK FROM OUR CUSTOMERS:

“ Thought I’d better drop you a line to say that at last my wind turbine has now been installed. The EMMA is working fantastically, **great bit of equipment**. In the last 12 days I have produced over 1000 kwh of electricity! I have a house sitting at a constant 22 degrees in every room and 400 litres of water at up to 90 degrees... I have exported 70kwh of electricity and only imported 38kwh in that time. **Fantastic!** I still have some fine tuning to do to the wind turbine and expect to be producing even more electricity soon! My next door neighbour has already gone to planning to see about an installation! **Many thanks for a fantastic product.** ”

“ I must say **I am amazed with EMMA**. It’s rather like **magic**. I have taken a shower, cleaned the tropical fish tank, done a little washing up – all of which used hot water, and yet the temperature in the tank has remained at the setting of 55 degrees. I am staggered. **Everything is happening automatically** without my intervention. ”

“ We continue to be pleased with EMMA and look forward to really reaping the benefits now winter is almost over. ”

“ I am very pleased with EMMA and propound its virtues to anyone and everyone! ”

“Thanks to Cool Power, my ESB meter has been stopped most of the time during the recent spell of bright cold weather. My friends can’t wait to get solar PV and EMMA”

“I will be recommending Cool Power to clients”

“Everything is going swimmingly well with your system”

We would be delighted to put you in touch with any of our customers if you would like to get their feedback directly.
